DATA DISASTER IS A CRUEL REALITY COLO5 IS YOUR BEST PROTECTION

“PEACE OF MIND SOLUTIONS”

Businesses large and small must prepare for data interruption, whether from a major natural disaster or a local emergency. Colo5 provides facilities and services to keep your data safe from loss and interruption. Our facility is unsurpassed in security, space, power and network services. We back that up with guaranteed support for installation and service, **24/7/365—just as you expect.**

No one gets past our guards, or the RFID and biometric security systems. With Cisco core to edge and our N+1 generator backup power system, Colo5 is capable of supplying the entire building indefinitely with the help of our top priority delivery of fuel. We designed this data fortress to be friendly to your people: we even offer office space just a few steps away from the nerve center of your data operation.

Colo5 is the standard by which any colocation facility should be judged, due to our array of exclusive protection measures. Nothing penetrates our category 5 hardened facility. How can we say this? We can say this because of the reinforced walls, the drop-down steel door barriers and the honeycomb steel screens on the windows—capable of stopping a 200 mph projectile.
